

## Revoke certificate

Certificates have to be revoked in case of:

- suspicion of a private key theft
- mistakes or errors detected in a certificate
- a change of data in a certificate
- resignation from the certification services provided by CERTUM
- a loss or a destruction of smart card with a certificate, also in case of suspicion of loss (only for private certificates)

Apart from the above mentioned situations, a user may demand certificate's revocation at any time. A revocation demand may also come from e.g. a user's employer (if that person financed a given certificate).

---

## How to do it

Certificates may be revoked:

- directly on our web site: [revoke certificate](#)
- by an official request (hard-copy) sent by mail, signed by the subscriber or authorized person (subscriber's supervisor or person indicated in the agreement)

## Revoke SSL EV certificate

- We accept revocation requests at our web site: [revoke certificate](#)
- on 24x7 basis
- CERTUM revokes an EV Certificate it has issued upon the occurrence mentioned in [Appendix 3 to Certificate Practice Statement](#)
