

**Certification services
related to the electronic
signature**

Internet Security www.certum.eu

Public key certificates provide users with the following options:

- unambiguous identification of persons on the Internet
- protection of mail and electronic files
- protection of WWW pages, bank services and online stores
- protection of software against forgery
- encryption of electronic files, directories and archives

Qualified public key certificates:

can be used for affixing and verifying electronic signatures equivalent to handwritten signatures.

CERTUM – General Certification Authority is the only certification authority in Poland compliant with the WebTrustSM/TM criteria, defined for certification authorities. It is also one of the main trusted certification authorities for products of the world's leading software producers, including Microsoft.

In 2002, pursuant to the decision of the Minister of Economy, Unizeto was the first in Poland to be registered as a qualified entity providing certification services related to the electronic signature.
